The 2017 release of AutoCAD Cracked Version 2017, titled Autodesk AutoCAD 2017, makes some of the core functions of AutoCAD 2016 available to be used in new versions of AutoCAD. These include: layer creation, surfaces, clipping tools, fillets, bevels, dimensions, hatch, polyline, shapes, polylines, and text. The full set of AutoCAD 2016 features is not currently available on the 2017 version. These new features have also been added to the mobile version of AutoCAD.

Contents A brief overview of the top 10 features new to the 2017 release of AutoCAD is given below. Please note that this is intended to give a quick overview of the features, and that full details can be found in the 2017 Release Notes. There are a number of features in the 2017 release of AutoCAD that require special configuration to be used. The feature configurations are detailed in the 2017 Release Notes. If you are not running a system that uses the Active Server Configuration feature, you will need to download and run the Configuration Manager for the features you want to use.

### 2D Feature Overview

In the new 2017 release of AutoCAD, you have the ability to place objects on the drawing canvas, create and edit predefined objects, create and edit points and lines, and modify the properties of objects. In addition, you can rotate, scale, and move objects.

### Creating Objects

You can add objects to the drawing canvas by clicking on a blank area of the drawing canvas and placing objects on the canvas. To open the object selection menu, press the space bar on your keyboard. When the object selection menu is open, click on an object type that is selected on the drawing canvas and use the object selection menu to add the object to the drawing canvas. In this example, the polyline is created from the START command with the first polyline connected to the CHOPTOOL command. To edit a selected object, double-click on the object, or double-click on the highlighted text in the command line. In this example, the CHOP command is used to move the object to the right by 10 feet.

### Creating & Editing Objects

You can edit or modify existing objects in the drawing canvas by clicking on the object that is selected in the object selection menu and selecting an object type to modify (on

C++ API, which allows the developer to program applications directly in C++. A customized version of the C++ API is also available, allowing applications to be written in Visual C++, VC# or Visual Basic. A plug-in model is also available. Scripting and scripting-based automation In AutoCAD Serial Key LT 2010, there are a number of scripting and scripting-based automation features. Python scripting, which is similar to VBA, but used by developers of design programs to create scripts. AutoCAD LT support scripting in Python 2.5 and 3.2. ObjectARX and AutoCAD Architecture, allowing developers to create applications that may access and manipulate objects in a drawing. AutoCAD Architecture is a component of AutoCAD LT 2010 that allows application developers to create applications that are accessed directly from the toolbars and menus. Visual LISP programming language, which allows the developer to create macros. The language is very similar to AutoLISP. Visual LISP macros can be used for tasks such as drawing and editing. Customization, content creation and delivery AutoCAD LT's customization options are much more extensive than AutoCAD's. AutoCAD LT includes a built-in user interface, which allows the user to create their own customised interface without having to buy an add-on tool. Over 4,200 built-in toolbars and toolbars can be customised. There are over 7,000 icons that can be added to the interface. It is possible to create multiple customization sets for different users. Customers can also create and deliver their own content through a number of options. AutoCAD LT can store content in a folder (or folder hierarchy) and retrieve this content when needed. The AutoCAD LT application includes a set of features that allow the delivery of content and presentation of data to various users. Information delivery AutoCAD LT includes several features for delivering information to customers and users. These include: Reports Product demonstration Tutorials Document delivery Not all of these features are available in AutoCAD LT 2010. Access Access provides users with a mechanism to interface with AutoCAD LT, which can be either from within the program, or by use of an external client (for example, from a web browser). The current version of Access available for AutoCAD LT is Access 2007. AutoCAD LT 2016 ca3bfb1094

Q: Passing arguments to function called via `*func(*args, **kwargs)` - python I'm writing a wrapper function that has to accept a function and its arguments as argument list. Currently I'm using `def func(*args, **kwargs): return wrapped(*args, **kwargs)` and `wrapped(func, *args, **kwargs)` But this doesn't really "pass the args to wrapped" and just passes the `*args` and `**kwargs` to wrapped. Is there a way to pass the args? I was hoping that I could just do `func(*args, **kwargs)` or `func(*args, **kwargs, *args, **kwargs)` so that I can pass those as arguments to wrapped. A: You can use keyword arguments: `def func(*args, **kwargs): return wrapped(*args, **kwargs)` or a default value: `def func(*args, **kwargs): kwargs.update(args) return wrapped(*args, **kwargs)` Opinion Sheriff's office should not stop keeping records A reader wants to know why law enforcement officers seem to be free to destroy evidence in his county. Posted Tuesday, June 23, 2014 12:05 pm Jeremy Colman I'd like to know why the sheriff's office at the Town of Ogunquit has not made it a policy to keep records of police activity. I know the office is short-staffed right now, but I also know that things like this have happened in the past. I've been reading various articles and websites online about the issue of destroying evidence by police officers. Some of the officer's explanations are very reasonable. I've also heard some very emotional, even crazy excuses from officers. The issues involved are complex, and I'm not trying to try to have a law enforcement officer tell me what I should and shouldn't do. But, if you are involved in law enforcement, I'd like to know why the Town of Ogunquit, where I live, has not made a policy in the past regarding this. I know it is not an easy thing to decide, but I also know that all officers could
